Digital Security Surveillance

Improve Security and Safety
Deter burglary, vandalism, shoplifting, and employee theft

Save Resources and Personnel Costs
Monitor assets with efficiency and control

Optimize Business Operations and Customer Service
Observe and analyze customer behavior and employee interactions

Get Started Today With Your Complimentary Security Assessment.

Our upfront complimentary security assessment includes:

- Detailed evaluation of your existing security system capabilities

- Review of your infrastructure readiness

- Recommendation of appropriate products, solutions and services to meet your business requirements

Order your complimentary security assessment.

- Critical Infrastructure

8 Reasons to Go Digital.

Digital security and surveillance systems were designed to keep pace with today's needs.

1. Proactive Protection
Digital security systems can proactively detect suspicious behavior and trigger an immediate response.

2. Easy Network Access
Authorized users can view live and recorded video at any time from virtually any networked location in the world.

3. Image Quality
Digital video delivers up to 16-times greater resolution than traditional analog cameras.

4. Simplified Management
Central management and remote monitoring streamlines operations by consolidating video surveillance, remote access, and alarm management into a single system.

5. Business Intelligence
Intelligent systems can automatically analyze live video content to develop relevant and insightful analytics, helping you understand customer behavior and improve business operations.

With the Added Benefits of Open, Standards-Based IP Video

6. Seamless Integration
Digital security solutions based on open standards let you integrate best-in-class equipment from leading vendors. Traditionally separate subsystems— like video surveillance, remote access controls, and alarm management—can now be integrated into one system within your Ethernet-based network.
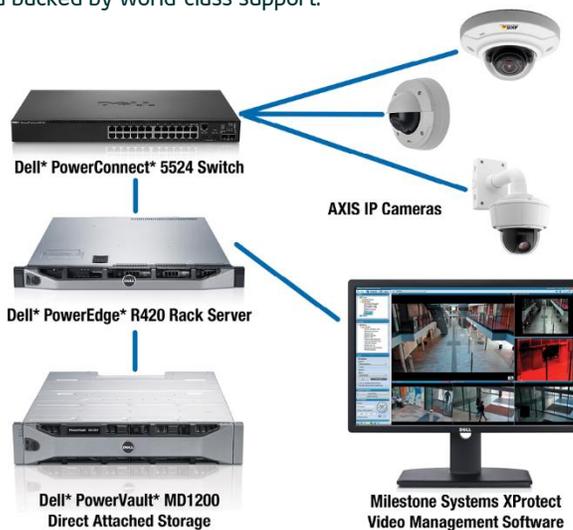

7. Future-Proof Scalability
The Intel® processor roadmap and open, standards-based building blocks from multiple vendors let you scale your system as your business needs grow, without costly changes.

8. Cost Effectiveness
Digital technology enables a total cost of ownership comparable to traditional analog CCTV systems, thanks to lower management and equipment costs and improved reliability.

SecurePod™ Open & Intelligent Video Solution
SecurePod provides preconfigured, validated, and scalable solutions, based on Intel® technologies and open IP video standards for high performance and easy scalability. SecurePod solutions are provided by IP video technology leaders, fully integrated, ready to deploy, and backed by world-class support.

Digital Security Surveillance Services from DSS-IS
Our service package starts with a comprehensive security assessment to analyze your existing systems.

- We provide you with a detailed plan designed to achieve the benefits of digital security and surveillance technology, while maximizing cost-effectiveness.

- Then we provide installation, configuration, and integration services, backed by extended hardware warranties.

- Ongoing services include storage requirements, system maintenance, video management system software updates, and a range of video analytics options tailored to your business objectives.
