

AXIS P12 Network Cameras

Miniature HDTV cameras for exceptionally discreet surveillance.

AXIS P12 Network Cameras offer small-sized, high-performance cameras for covert installations for ATMs, where a discreet and compact surveillance solution is required.

AXIS P1204 Network Camera

AXIS P1204 can be mounted flat or angled on any surface, using the angled fastening bracket. The camera can also be mounted covertly behind a thin metal sheet in an ATM.

AXIS P1214 Network Camera

AXIS P1214 can be mounted behind any wall or flat surface, with a flush mount bracket.

AXIS P1214-E Network Camera

AXIS P1214-E is a water- and dust-resistant, IP66-rated model, which offers the same mounting options as AXIS P1214. The camera can also be mounted in the supplied housing suited for both indoor and outdoor applications.

AXIS P12 Network Cameras – Key features

- > HDTV 720p, 1280x720 resolution, 16:9 wide-screen format
- > Support for H.264
- > Motion detection
- > DC power and Power over Ethernet
- > I/O for connections to external devices (sensors and relays)
- > Open industry standards for easy integration
- > HTTPS encryption, IEEE 802.1X
- > Full range of mounting accessories

COMMUNICATIONS

Discreet cameras. Obvious benefits.

Bringing the IP surveillance advantage to your ATM operations.

Often placed in open, unsecured locations with people loitering or walking by at all hours of the day, we know ATMs pose a unique security challenge for you. Vandalism, attacks, robberies, and fraud are an everyday reality. Yet, keeping your ATM fleet operational is vital to your bank's business. And that depends not only on keeping people and property safe, but also on enhancing the user experience and lowering your own resource investments — both time and money.

AXIS P12 Network Cameras are a digital covert surveillance solution for ATMs. As the leader in network video surveillance, Axis offers the most advanced security and safety benefits. With the IP advantage, not only do you have cutting-edge surveillance, but you also get an easy, cost-effective way to improve customer service and streamline operations.

Improve safety and security

Axis makes it easy to enhance security across your whole ATM fleet with reliable, round-the-clock surveillance — detecting crime and preventing it. AXIS P12 Network Cameras can send automatic alarms when the camera is covered or tampered with — instantly making you aware of possible crime or security breaches.

For alarms that require immediate action or further investigation, you can quickly deliver evidence to police and other stakeholders. Plus, AXIS P12 provides HDTV-quality video, giving you the clearest images on the market for amazing detail and enhanced identification possibilities, even in difficult lighting conditions.

Streamline operations and reduce costs

With remote access to live and recorded video, there's no need to waste time and resources sending personnel to retrieve video footage from an ATM. In cases with limited network connection, you can easily retrieve video overnight. H.264 video compression gives you additional bandwidth and storage savings. And, depending on your recording requirements, you can take advantage of edge storage and store video on each camera — eliminating the need for costly, bulky storage inside the ATM. Further, Axis network video solutions reduce maintenance costs compared to traditional DVRs, since there are no moving parts that can break down.

A perfect fit for your needs

With a deep understanding of banking needs, an open technology platform, and the widest range of video applications in the industry, Axis can help you build a cutting-edge covert surveillance solution designed specifically for your ATM fleet.

Maintain tighter control over fraud

From card skimming to cash trapping, fraud can hit your bottom line — hard. There is a constant development in technology to fight this. Axis network video and our partner solutions provide the tools and quality evidence you need to eliminate these problems from your ATMs. Video can be easily integrated with transactional data to get accurate evidence and reduce the time for investigation. And with automated alarms you are always in control.

Invest in a scalable and reliable future

Axis network video solutions let you leverage existing investments while giving you a scalable system that grows with your needs — easily and economically adapting to changes in your ATM fleet. Axis provides you with video solutions that are in compliance with both internal and external regulations regarding data protection and privacy laws.

Eye-level identification

Discreet, pinhole cameras mounted at eye-level capture vital facial details from a natural angle for enhanced security and identification.

Axis' Corridor Format

Axis' Corridor Format provides a vertically oriented video stream, perfectly adapted to narrow areas — maximizing image quality while eliminating the typical bandwidth and storage waste of landscape formats.

HDTV Image quality

Crystal-clear HDTV 720p image quality with backlight compensation makes positive identification easy, regardless of lighting conditions.

Tampering alarm

Automatic alerts ensure your surveillance system always works, and can also indicate crimes in progress so you can take immediate action.

Flexible mounting

Since the AXIS P12 sensor unit and main unit are separate and only connected by one 8-meter (26 ft.) cable, you can safely place the main unit within bank walls while the sensor unit is installed in the ATM.

Efficient video compression

AXIS P12 cameras deliver multiple, individually configurable video streams in H.264 compression, which greatly optimizes bandwidth and storage needs without compromising image quality.

Remote access

With remote access to live and recorded video, you can facilitate quick investigations and save on resources. There is no need to wait for a security team to open an ATM and retrieve the video.

Edge storage

With the cameras' built-in microSD/microSDHC card slot for video storage, there's no need for additional equipment like DVRs — saving you money and space. It can also serve as a backup in case the primary storage fails.
